

MOVING FAST TOGETHER: TEST DRIVEN INFRASTRUCTURE

VICTORIA D JEFFREY

TWITTER: @VICKKOALA

GITHUB: VJEFFREY

WHO AM I?

- ▶ Software Engineer @ Chef
- ▶ Over the last six months: focused on various InSpec related projects

SO, WHAT IS THIS LADY TALKING ABOUT???

- ▶ what is infrastructure testing? why should we do it?
- ▶ some awesome tooling for writing infrastructure tests
- ▶ quick demo
- ▶ a little more about InSpec and what it can do

WHAT IS INFRASTRUCTURE TESTING????

- ▶ testing your IT infrastructure
- ▶ traditionally done manually/with one-off scripts

WHAT IS INFRASTRUCTURE TESTING????

- ▶ testing your IT infrastructure
- ▶ traditionally done manually/with one-off scripts
- ▶ config mngmt tools like Chef allow infrastructure to be described as code - makes it easy to introduce tests

WHAT IS INFRASTRUCTURE TESTING????

- ▶ testing your IT infrastructure
- ▶ traditionally done manually/with one-off scripts
- ▶ config mngmt tools like Chef allow infrastructure to be described as code - makes it easy to introduce tests
- ▶ so let's treat our infrastructure like code
- ▶ test-kitchen, server spec...

WHY IS INFRASTRUCTURE TESTING IMPORTANT?

- ▶ what kind of tests do you have for your app now?

WHY IS INFRASTRUCTURE TESTING IMPORTANT?

- ▶ what kind of tests do you have for your app now?
- ▶ when do you run those tests? after you've deployed?

WHY IS INFRASTRUCTURE TESTING IMPORTANT?

- ▶ what kind of tests do you have for your app now?
- ▶ when do you run those tests? after you've deployed?
- ▶ so what about infrastructure tests?

WHY IS INFRASTRUCTURE TESTING IMPORTANT?

- ▶ what kind of tests do you have for your app now?
- ▶ when do you run those tests? after you've deployed?
- ▶ so what about infrastructure tests?
- ▶ why not integrate those into your CI system?

SO, YOU HAVE A CI PIPELINE/BUILD SYSTEM....

....AND YOU'RE RUNNING YOUR UNIT AND INTEGRATION TESTS IN IT...SOMETHING LIKE THIS

Verify
Approval

Build

Acceptance
Deliver

Union

Rehearsal

Delivered

 **Verify**

-  Unit

Passed

Download

**DON'T WANNA HEAR YOUR INFRASTRUCTURE IS
FAILING AT MIDNIGHT...**

THAT MAKES TOWLIE SAD..

RIGHT. SO WE KNOW WHAT WE WANT TO DO WITH OUR INFRA TESTS....

BUT HOW DO WE ACTUALLY WRITE INFRASTRUCTURE TESTS??

RIGHT. SO WE KNOW WHAT WE WANT TO DO WITH OUR INFRA TESTS....

BUT HOW DO WE ACTUALLY WRITE INFRASTRUCTURE TESTS??

WHAT IS INSPEC??

- ▶ open-source framework for testing your infrastructure

WHAT IS INSPEC??

- ▶ open-source framework for testing your infrastructure
- ▶ command-line tool

WHAT IS INSPEC??

- ▶ open-source framework for testing your infrastructure
- ▶ command-line tool
- ▶ platform agnostic: you're only limited to what you want to do

WHAT IS INSPEC??

- ▶ open-source framework for testing your infrastructure
- ▶ command-line tool
- ▶ platform agnostic: you're only limited to what you want to do (CentOS, Debian, Oracle, Solaris, Windows, FreeBSD, AIX, RedHat, SUSE, HP-UX)
- ▶ run InSpec locally to test against any target – InSpec doesn't care if you use Chef, Ansible, Puppet - whatever.
- ▶ test your infrastructure via ssh, winrm, docker

♥ OpenSSL

#FAIL

NOW LET'S USE INSPEC....

```
describe ssl(port: 443).protocols('ssl2') do  
  it { should_not be_enabled }  
end
```

NICE, HUH?

SO HOW DO WE USE INSPEC??

IT'S A GEM!

GEM INSTALL INSPEC

YA, COOL, K. HOW DO I RUN IT??

\$ inspec exec test.rb

```
Target: local://
```

```
SSL/TLS on
```

```
✓ localhost:443 with protocol == "ssl2" should not be enabled
```

```
Test Summary: 1 successful, 0 failures, 0 skipped
```

SO, THAT'S COOL, BUT...MY PROD ENV != MY LAPTOP

- ▶ well, did you see that little target thing in the output??

We can run the tests against other targets...

```
# run test locally  
inspec exec test.rb
```

```
# run test on remote host on SSH  
inspec exec test.rb -t ssh://user@hostname -i /path/to/key
```

```
# run test on remote windows host on WinRM  
inspec exec test.rb -t winrm://Administrator@windowshost --password 'your-password'
```

```
# run test on docker container  
inspec exec test.rb -t docker://container_id
```

D-D-DEMO TIME!!!!

to the terminal we go!

D-D-DEMO TIME!!!!

example profile:

<https://github.com/dev-sec/tests-os-hardening>

secured configuration for server:

<https://github.com/dev-sec/chef-os-hardening>

BUT WAIT, WE'VE SEEN THESE KINDS OF DESCRIBE BLOCKS BEFORE...

```
describe file('/etc/sysconfig/init') do  
  its('content') { should match 'umask 027' }  
end
```

"the describe block"

SO WHAT'S SO SPECIAL ABOUT INSPEC??

MAKE IT EASY TO UNDERSTAND

```
control 'cis-3.1' do
```

```
  impact 0.7
```

```
  title 'Set Daemon umask'
```

```
  desc 'Set the default umask for all processes started at boot time '
```

```
  describe file('/etc/sysconfig/init') do
```

```
    its('content') { should match 'umask 027' }
```

```
  end
```

```
end
```

SO MUCH GOODNESSSSSS...

\$ INSPEC HELP

Commands:

```
inspec archive PATH          # archive a profile to tar.gz (default) or zip
inspec check PATH            # verify all tests at the specified PATH
inspec compliance SUBCOMMAND ... # Chef Compliance commands
inspec detect                # detect the target OS
inspec env                   # Output shell-appropriate completion configuration
inspec exec PATHS            # run all test files at the specified PATH.
inspec help [COMMAND]       # Describe available commands or one specific command
inspec init TEMPLATE ...    # Scaffolds a new project
inspec json PATH             # read all tests in PATH and generate a JSON summary
inspec msccm SUBCOMMAND ...  # Microsoft Systems Center Configuration Manager commands
inspec scap SUBCOMMAND ...   # SCAP commands
inspec shell                 # open an interactive debugging shell
inspec supermarket SUBCOMMAND ... # Supermarket commands
inspec vendor                # Download all dependencies and generate a lockfile
inspec version               # prints the version of this tool
```

Options:

```
l, [--log-level=LOG_LEVEL]    # Set the log level: info (default), debug, warn, error
  [--log-location=LOG_LOCATION] # Location to send diagnostic log messages to. (default: STDOUT or STDERR)
  [--diagnose], [--no-diagnose] # Show diagnostics (versions, configurations)
```

INSPEC DETECT

```
$ INSPEC DETECT -T SSH://VAGRANT@192.168.34.102 -I .VAGRANT/  
MACHINES/UBUNTU1204/VIRTUALBOX/PRIVATE_KEY
```

== Operating System Details

| | |
|----------|--------|
| Name: | ubuntu |
| Family: | debian |
| Release: | 12.04 |
| Arch: | x86_64 |

INSPEC SHELL: THE INTERACTIVE DEBUGGING SHELL

```
inspec> command('uname -a').stdout
=> "Darwin vjeffrey01 15.6.0 Darwin Kernel Version 15.6.0: Mon Aug 29 20:21:34 PDT 2016; root:xnu-3248.60.11~1/RELEASE_X86_64 x86_64\n"
inspec> sshd_config.Protocol
=> "2"
inspec> help resources
apache apache_conf apt ppa audit_policy auditd_conf auditd_rules command bash file bond bridge d
irectory etc_group gem group grub_conf host iis_site inetd_conf interface iptables json kernel_m

windows_feature xinetd_conf wmi yum yumrepo yaml csv ini
inspec> █
```

YOU JUST NEED TO CHECK IF ONE OF THOSE TESTS PASS?
NO PROBLEM! WE GOT YOU COVERED!!
DESCRIBE.ONE

```
control 'or-test' do
  impact 1.0
  title 'This is a OR test'
  describe.one do
    describe ssh_config do
      its('Protocol') { should eq('3') }
    end
    describe ssh_config do
      its('Protocol') { should eq('2') }
    end
  end
end
end
```

THE PROFILE....

- ▶ what is a profile, inspec init, inspec check

```
➔ ~ inspec init profile testing
WARN: Unresolved specs during Gem::Specification.reset:
  net-ssh (< 4.0, >= 2.6.5, >= 2.9)
  winrm (~> 2.0)
  logging (< 3.0, >= 1.6.1)
  docker-api (~> 1.26)
WARN: Clearing out unresolved specs.
Please report a bug if this causes problems.
Create new profile at /Users/vjeffrey/testing
* Create directory controls
* Create file controls/example.rb
* Create file inspec.yml
* Create directory libraries
* Create file README.md
* Create file libraries/.gitkeep
```

\$ inspec check testing

```
Profile:      testing
Controls:     2
Timestamp:    2016-09-22T23:46:27-04:00
Valid:        true
```

LET'S GET FANCY WITH THOSE PROFILES...

- ▶ `inspec exec examples/inheritance`

USE INSPEC WITH TEST-KITCHEN!!

- ▶ add inspec to your .kitchen.yml as a verifier option!

```
verifier:  
  name: inspec  
  sudo: false  
  format: json
```

CHECK THIS THANG OUT >>>>>

- ▶ `inspec exec examples/profile -- format json`
